

# LCFG in SEE

- 730 profiles
- 330 active profiles
- Split between RH9, FC3 and FC5
- All new machines are FC5

# LCFG in SEE

- Standard SEE build is dual-boot Windows/Linux
- Single-boot Linux for some research groups.
- PIE image build for dual-boot
- CD build for single-boot

# LCFG in SEE

- Compute cluster built with LCFG
- 20 individual machines behind 1 DNS name
- Planning to buy several multiprocessor dual/quad core boxes and use GridEngine

# LCFG in SEE

- Problems
  - Laptops
    - Disconnected boot
    - Local users, separate password, cached credentials
    - Wireless – much better with FC5
  - Network restart after DHCP failure
  - 64 bit
